Automatic Meter Reading System and Water Meter Replacement

Keeping Pace
With Technology

The MUA and Automatic Meter Reading [AMR]

Several years ago, the Authority approved a plan to improve and upgrade the water metering system within the Township. Initially, we began by requiring the installation of remote water meter reading equipment on all new water service hook-ups for the purpose of Automatic Meter Reading (AMR). This move has allowed for improved efficiency of operations within the Authority, and as such, has enabled us to serve all the customers within the system more efficiently.

As with all evolving technology, AMR technology has also since progressed. It has now reached the point where, it is at the pinnacle of its development. Therefore, the Little Egg Harbor MUA is now prepared to move forward with the final phase of our planned improvements, by expanding the use of this AMR

technology, on a full scale throughout our entire service area. We are now in the process of sending out Requests for Proposals from all qualified Contractors to furnish and install a complete meter change-out and AMR upgrade. By so doing, the Authority remains in compliance with the industry recommended meter change-out interval, thus assuring you of accuracy in the metering of your household water usage.

AMR Advantages

The Authority is committed to holding the line on escalating expenses, without sacrificing the quality of the water we deliver or service we provide to our customers. Reading water meters is a costly and time consuming expense which would continue to increase as more meters are added to our ever expanding service base. The application of updated automatic meter reading technology has become a key factor for the increased efficiency and the

overall lowering of operating costs.

Our service quality will be improved through updating our meter reading system and equipment. Time and manpower spent reading water meters will become time spent in productive customer service and support endeavors. Virtually error free readings and the elimination of any need to visually read your water meter, insures that your reading will be accurate every time.

The Authority will also be able to identify unusual changes in water use patterns, which is a possible indication of leaks in your plumbing system. You will be alerted to such, long before they can become major problems for you, thus helping to conserve our natural resources and save you money.

Little Egg Harbor MUA, keeping pace with technology to serve you better.
